

“Jenny, go test your blood sugar before you go out and play.”

“But Mom, I just tested a few minutes ago. I’m fine!”

Sound familiar? Turns out Jenny’s BG was 40.

A Number Isn’t Enough

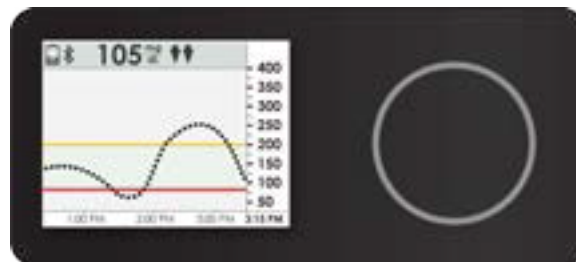

Even if your child tests frequently, a lot can happen between fingersticks. A number alone can’t tell you which way your child’s glucose is headed and how fast it’s getting there.

With Dexcom Continuous Glucose Monitoring (CGM), you can stop the guesswork and worries that come with making decisions based on a number. CGM allows you and your child to make confident and informed decisions for optimal diabetes management⁺. It even provides an alarm if your child goes too high or too low to alert you at critical times.

If you saw this number, what would you or your child do?

If you or your child saw this instead, would you have *done anything differently?*

⁺The Dexcom G5 Mobile CGM System does not replace a blood glucose meter. Always use the values from your blood glucose meter for treatment decisions.

Freedom for Them, Peace of Mind For You

Viewing glucose data is easier than ever with Dexcom G5 Mobile CGM System. With readings every 5 minutes now displayed directly onto your smart device*, Dexcom G5 Mobile will give you the glucose information you need so you can focus on where you're headed in life!¹

A completely mobile CGM

Wireless technology is now built into the transmitter. Simply turn on your compatible smart device* with the Dexcom G5 Mobile app and stay one step ahead of your diabetes.

Two approved placement areas¹

to choose from for pediatric users, the abdomen and upper buttocks - for secure, discreet wearability.

Transmission range of 20 feet¹

gives your child the freedom and flexibility to just be a kid.

Dexcom Follow App

What you know will allow you to be there for your loved ones while enjoying peace of mind. With their real-time glucose readings appearing directly on your phone*, you'll be able to follow[^] your loved ones and help them better manage their diabetes.

BRIEF SAFETY STATEMENT

The Dexcom G5 Mobile Continuous Glucose Monitoring System is a glucose monitoring system indicated for detecting trends and tracking patterns in persons (age 2 years and older) with diabetes. **CONTRAINDICATIONS:** Remove the System before MRI, CT scan, or diathermy treatment. The device is MR Unsafe. Do not bring any portion of the System into the MR environment. Taking acetaminophen while wearing the sensor may falsely raise your sensor glucose readings. **WARNING:** Do not use the System for treatment decisions. The System does not replace a blood glucose meter. The System is not approved for use in pregnant women, persons on dialysis or critically ill persons. If a sensor breaks and no portion of it is visible above the skin, do not attempt to remove it. Seek professional medical help if you have infection or inflammation. Report broken sensors to Dexcom Technical Support. Sensor placement is not approved for sites other than under the skin of the belly (ages 2 years and older) or upper buttocks (ages 2-17 years). Your smart device's internal settings override your app settings. Accessory devices (like a smart watch) might override your smart device's alert and notification settings. The Share feature must be turned "On" with an active internet connection to communicate glucose information to a Follower. The Follower must download and install the Dexcom Follow App onto a separate smart device with an active internet connection to receive data. Contact Dexcom Toll Free at 877-339-2664 or www.dexcom.com for detailed indications for use and safety information.
